### Facilitate Equipment Installation:

The removable rack makes equipment installation and integration far more efficient because it allows unrestricted accessibility. Cables can be routed easily, and connections can be attached regardless of orientation or location. When the integration is complete, the populated rack slides smoothly into the shock/vibration isolated enclosure. A few seconds to engage the slide latches, and the finished product is ready for deployment.

### Rack Engagement- Simply the Best

The latches that secure the removable rack in the Mitraset® enclosure have been carefully designed to ensure the rack will not disengage during the toughest shipping and handling operations. The removable rack engages and disengages more easily than any other similar product in the case industry. Simply slide the actuating lever inboard on all four (4) front mounted latches, and the body of the latch swings away automatically so the rack can be removed. The entire process takes less than five (5) seconds; the slide actuator requires no tools and the latch can be operated while wearing arctic gloves or MOPP IV gear.

### Get Your Solutions to the Field Faster

ZARGES, Inc. stocks several Removable Rack Mitraset® sizes for immediate shipment, and we can assemble and ship removable racks in less than two (2) weeks. If the enclosure size you need is not available immediately, have us ship the rack in advance of the enclosure. The rack can be populated and the equipment tested while the aluminum containers are being fabricated and shipped. When the enclosure arrives, simply slide the populated rack onto the isolation frame, and the finished solution is ready for deployment.
