Zarges aluminum cases should always be your first choice when your customer is asking for EMI/RFI shielding. Shielding is accomplished by building an electrically conductive Faraday cage around the equipment - and aluminum is a superior material for this.

Zarges cases are the perfect choice for your EMI/RFI applications. As a highly conductive metal, aluminum is a natural shielding material.

Zarges cases can be readily designed for high levels of EMI/RFI shielding protection simply by choosing the right finish and adding EMI/RFI gasketing.

There are no expensive, heavy add-on coatings or materials necessary, unlike plastics or composites. There is nothing that can flake off with case impacts, resulting in conductive FOD particles shorting out critical equipment.

In the case of the 19" Mitraset, we can shield just the innerframe, the centerbody, or the entire case.
